About astervox sip connect

astervox sip connect provides high quality, feature rich and flexible sip trunk solution to enterprise business looking to enhance their telephone system with more affordable call rates, fail over phone lines, business continuity or to expand their call capacity without the need of investing into additional hardware.

astervox sip connect trunking service provides an IP connection to your existing PBX infrastructure, allowing you to make calls over your existing data connection.

This gives you all the benefits of IP voice, such as advanced call handling and routing, without replacing your entire phone system.

Benefits of astervox sip connect

Most affordable call rates

astervox sip connect provide you with instant access to the most affordable call rates in town. astervox sip connect directly integrates with your ip-pbx and does not need any additional hardware to be installed.

Reduce phone line rental cost

astervox sip connect provides you with additional phone line capacity for your telephone system. You can choose how many concurrent calls you would like to add. We also provide you with local and international phone numbers (50countries and 8000 cities)

Add-on of Enterprise features

astervox sip connect offers value-added services such as IVR (auto attendant), call recording and call center services to your phone system

Business continuity

In case disaster strikes or your ISDN phone lines would be subject to a service interruption, all calls would be automatically switched trough astervox sip connect. You can choose to what destination the calls should be routed and give your employees immediate access to phone services anywhere in the world

astervox

How does astervox sip connect work?

astervox sip connect provides high quality VoIP calls via the astervox cloud. There is no need to dial a prefix to enjoy the benefit of our affordable call rates.

We are working only with tier one partners to ensure the highest in call quality and system reliability. astervox sip connect add a complete new trunk to your phone system giving you the ability of LCR (least call cost) routing as well allows you to reduce load on your existing PSTN or ISDN lines.

astervox sip connect provides you with up to 240 concurrent channels per trunk, allowing you to make and receive calls.
